Abstract of JP8062214

PURPOSE: To obtain a highly sensitive and highly reliable measurement result in a short time without being affected by a measurement-interfering substance in a humor even when a humor specimen is measured without pretreatment.

CONSTITUTION: Reagents herein used are a magnetic particle supporting a substance to be coupled to a substance to be measured, a non-magnetic coloring particle and a magnetic particle to be coupled to a measurement interfering substance. A humor is mixed with the reagents to remove the magnetic particle and the substance coupled thereto by magnetization. Then, the amount of the non-magnetic coloring particle left is measured.
